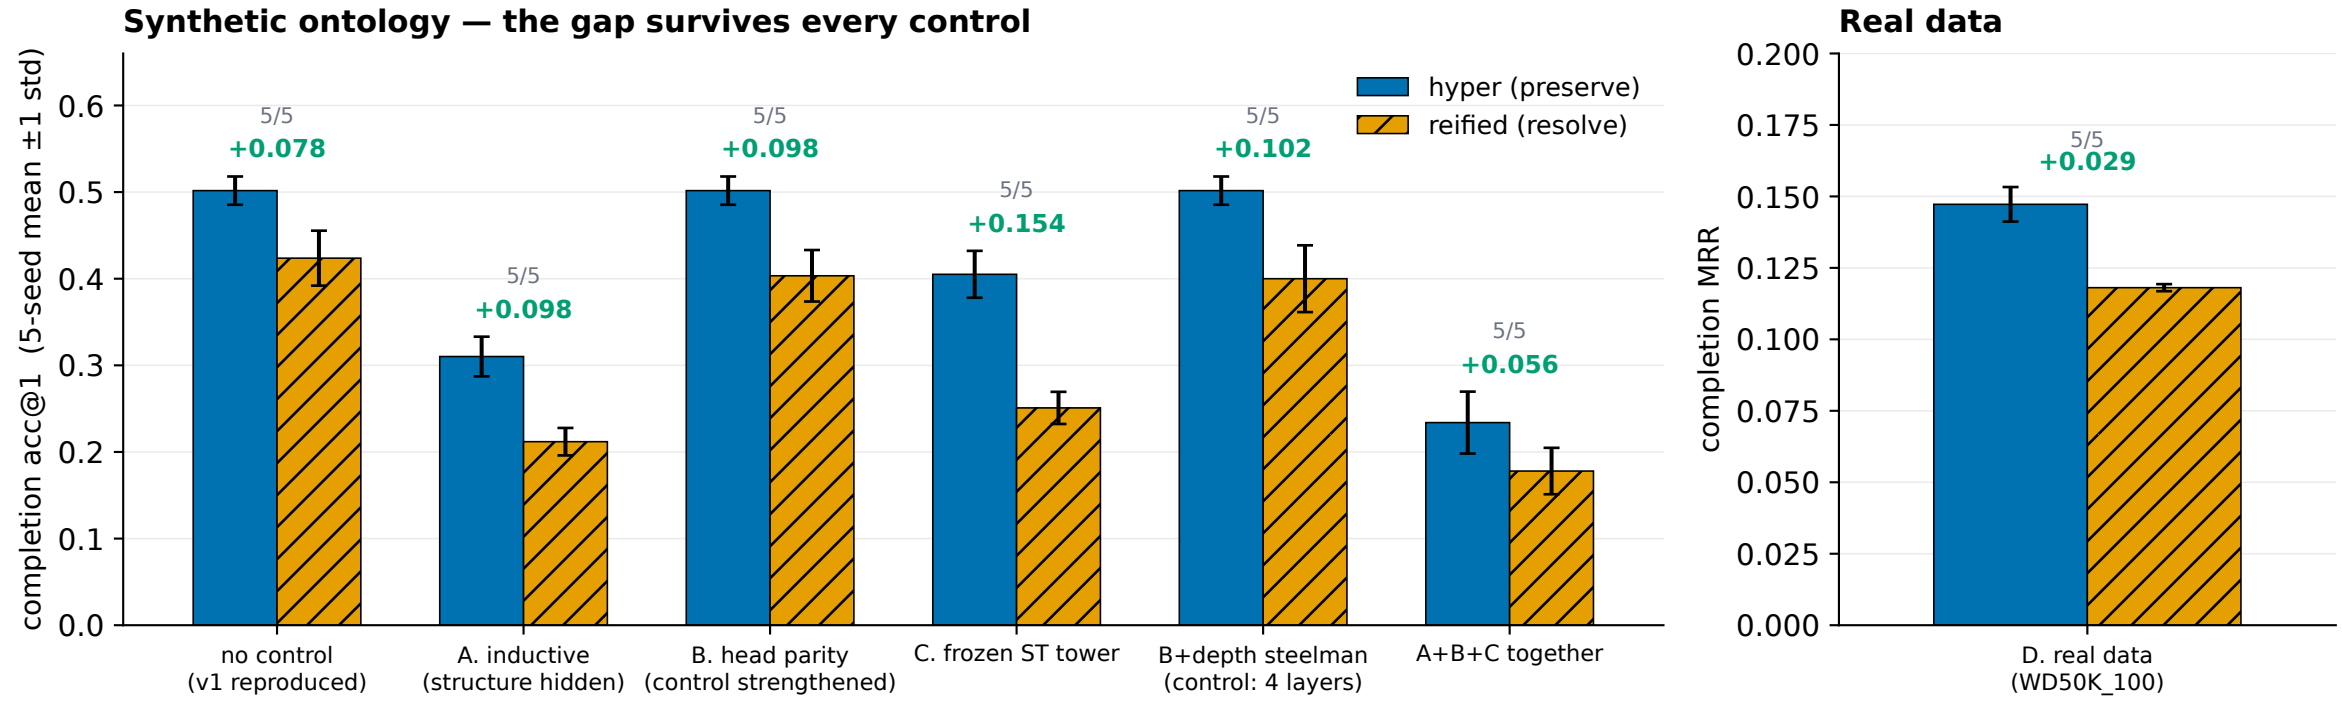
Preserving the fact wins n-ary completion under every pre-registered control



Green = gap (hyper minus control). '5/5' = seeds in which hyper won this metric; the pre-registered rule required >=4/5 on both judged metrics.
The steelman column gives the control four layers and 14% more parameters. Absolute accuracy falls sharply as controls are added; the gap persists in every condition (+0.056 to +0.154) but is smallest when all three are applied at once, and it is not monotonic in the number of controls.
